INVITATION

Le laboratoire EFLUM a le plaisir de vous inviter à un séminaire

Unsettled issues in the problems of atmospheric radiation

Prof. Dr. Atsumu Ohmura

Institute for Atmospheric and Climate Science, ETH, Zurich

mercredi 29 octobre 2008
à 12h15

Salle de conférence GR A3 31 (3ème étage, Bât. GR)

The major climate changes are caused by the alteration of radiation. It is of fundamental importance to understand the budget of radiation and to detect its changes. Despite its importance the radiation balance in the atmosphere is a poorly explored area. This can be seen in the limited understanding of this topic in the IPCC AR4. The climate change during the observational period will be interpreted by comparing the changes in irradiance and temperature.
