

# EGPR project and course

---

Students work together in teams with members from different universities. Group work is important. Each group has a coach to help you, but it is the team that should do the work.

There are four project phases:

1. Market survey – To find out what is available already and look for possibilities for innovation
2. To work out three prototype ideas that might be of interest to the company
3. To detail one of the prototypes
4. To make the prototype

Each phase ends with a presentation and report by group.

The final week of the project is held at one of the universities, this year in Budapest, where the teams finally meet in person and finish their prototype as well as working on the final presentation and report.
